try 470k//470pf here for Marshall response. It lets more gain and highs through as well
you can remove 220k and add jumper here
this 220k was added on my preamp as well, it does take more raspy highs off, but maybe too much?
this 1meg//220pf network rolls off the high end raspberries, making it smoother sounding than 470k//470pf
.68uf//2.7k, maybe a 250uf//2.7k for a Plexi, or do a .68uf //1.5k ? EH?
compare the components with a Marshall 1959 super lead circuit or Plexi
this 1uf might go....hmmm
Mod to Fender circuit here. 68pf 1meg. original 3.3meg//10pf
